

GREEN TERMINAL

An airport teeming with greenery

Majestic kinetic sculptures called “Petalclouds”

are at the heart of Changi Airport’s Terminal 4 building, which opened in 2017.

Takenaka Corporation designed the airport teeming with greenery inside and outside, and natural lighting from skylights, an expansive green atrium, and spaciousness comfort the senses of anxious and weary travelers.

The building achieved a Gold Plus Award from the Singapore Building and Construction Authority’s renowned “Green Mark” system.

Meanwhile, Takenaka Corporation is continuing its efforts to create buildings with new added value through fusion of “design”, “technology” and “environment”.
